Carbon

Titanium

Titanium was discovered in England by William Gregor in 1791. It is a metallic-white lustrous element, very lightweight with the highest strength-to-weight ratio of any metal, ductile, corrosion resistant and temperature stable. Because of its complicated extraction process this precious metal is twenty times as expensive as steel. The specially manufactured precision thickness titanium tubes give all JuCad titanium trolleys their maximal sturdiness at minimal weight.

Stainless Steel

Highest quality special purity alloyed stainless steel with its elegant surface sheen, known as V2A steel, is extremely strong. The outstanding physical characteristics and high corrosion resistance of this material make it specially suitable for the construction of the elegant and robust JuCad golf trolleys.

Carbon

Strictly speaking carbon fiber-reinforced polymer, CFP for short, is a compound material in which several layers of carbon fibres are layered in a matrix of synthetic polymers. High strength at low weight are the hallmark of CFP without which modern Formula 1 racing would today be unthinkable. Our computers employ the latest lamination theory programs geared specially for the stress requirements arising on golf courses.

Tradition and Innovation

We are setting ourselves high standards in the art and methods of our specialised constructions. It is now 30 years that we are based in Limburg for applications of our special systems of bending tubular materials. These 30 years were shaped by the will and abilities to direct our future through continual questioning of the existing, ever looking for new ways to create something better than yesterday's state of the art. Functionality and durable quality form the basis of the international success of Jutec and its trademark, JuCad – handmade in Germany.

Jutec Biegesysteme GmbH – a family firm celebrates its 30-year anniversary in 2010

This German company develops and manufactures tubular bending systems of the highest order since 1980 for use world-wide in industry and commerce. This accumulated expertise is reflected in the concept and manufacture of the exclusive JuCad golf trolleys. The successful family firm is now in the hands of the second generation owners – daughter Kira and her husband Jörg Jung, Diplom-Ingenieur MBA – offering optimal solutions for the discerning golfer.

Company founder Werner Jungmann, himself a passionate golfer, began in 1988 to apply his tubular bending technology to the design and construction of elegant and small-folding golf trolleys with 3-spoke wheels. Their refined form distilled to its absolute essentials providing maximal ease of use characterise the by now classic JuCad design. Next followed the first electric trolley in stainless steel retaining the original JuCad design by keeping the electric motors invisible. The small battery system was also kept invisible by stowing it in the golf bag thus ensuring the long service life of this high tech component. JuCad continued to pioneer the way in 2003 with the use of lithium-ion battery technology for electric golf trolleys – now much of the world market has followed.

Today a staff of over 50 are pooling their special skills and experience with their full commitment to the aims of the company to produce innovative products for golfers. The range of striking JuCad golf trolleys guarantee that every client can find a trolley to suit his personal demands.

Perfection in every detail

JUTEC – always ahead at every turn! Our slogan for 30 years. We are passionate about bent metal tube systems for construction, plumbing, plants, automotive and aircraft construction and many other fields of application. Building on the background of this experience we began in 1988 to find ways to put our range of machine tools to use in making the complicated tubular pieces for golf trolleys. This led to our trademark JuCad – one of the leaders in the world of golf trolleys. Design and function to fire the enthusiasm of every golfer.

Every JuCad trolley is a masterpiece of perfectly welded joints.

We use high-precision CNC (computer numerically controlled) lathes and milling machines for undeviating accuracy – quality made in Germany.

Our multi-axis machines assure absolutely precise matching fits.

All JuCad models are finished by hand as the only means to achieve their distinctive surface lustre.

JuCad – streets ahead through well thought through and reliable technology.

Titanium-glass fibre free running wheels – up-to-date racing technology for best ease of use. Easy push-fit in a wide choice of colours at no extra cost.

All JuCad electric trolleys come with the JuCad Powerpack and a small handy charger. The Powerpack is securely protected inside the golf bag to guarantee its long service life. It contains a high-performance lithium battery with an endurance of up to 45 golf holes as well as the intelligent electronics. JuCad electric golf trolleys were leading the world in 2003 with their use of lithium battery technology.

The JuCad remote control adds to the fun of use – the trolley can be controlled at any time either by the stepless turning control on the handle or with the clearly layed-out remote control for movement in any direction. Your golf equipment is therefore always at the right place sparing you unnecessary walking. Every JuCad remote control has its own unique transmission code to prevent misdirection – beyond the transmission range the trolley will come to an automatic halt.

The JuCad remote control is an optional extra for all JuCad Titan electric trolleys and also for the JuCad Carbon Travel.

The right handle height for every height of golfer – handle bar with crown teeth arrestment is adjustable to suit every individual.

Only one piece of luggage! Your JuCad trolley has room in the JuCad Travelcover – designed to accommodate your complete golf equipment plus any of the following trolley models:

- JuCad Titan
- JuCad Gold
- JuCad Black Edition
- JuCad Junior
- JuCad Carbon
- JuCad Carbon Travel
- JuCad drive SL Travel

JuCad drive SL Travel

The best-selling JuCad electric golf trolley with mini packing-size

Weighing only 5.9 kg the JuCad drive SL Travel is the flyweight amongst golf trolleys. This super-light titanium trolley offers absolute stability and guarantees sporting elegance with maximal flexibility. This exclusive electric trolley in high-performance titanium has an additional push-joint to achieve a miniscule packing-size of only 65x35x15cm. Given this folded size it will fit not only into the boot of any sports car but also inside the Travelcover in addition to your golf bag – you travel only with a single piece of luggage. An environment-friendly high-performance lithium battery provides ample power and is invisibly stored inside the golf bag. The intelligent JuCad traction system has a permanent two-wheel drive with 2 high-tech motors plus an electronic braking system giving optimal performance even on steep mountain courses. The comfortable rotary control switch with D=drive, N=neutral and R=reverse functions together with the pre-set distance option add to the trolley's distinctive features. The strong yet light titanium-glass fibre wheels bring Formula 1 technology onto the fairway with perfect driving performance.

JuCad drive SL

The refined JuCad electric trolley

A perfect combination of timeless design and functionality make the JuCad drive SL a professional companion. This comfortable electric trolley in high-grade titanium, with a small and flat packing size, is the optimal trolley for the club golfer having only a single push-fit connection. The JuCad drive SL with its robust construction is a reliable partner on the course and suitable for the heaviest bags – it simply has no weight limit. Its all-wheel drive system powered by two invisible high-tech motors guarantees a quiet and dynamic round even on very hilly courses. The environment friendly power pack is safely stored in your golf bag – the heart of the trolley system is therefore protected from all external influences and the elegant appearance is not spoiled by technicalities. The elegant rotary control switch guarantees a comfortable round of golf.

The single-fold electric titanium trolley

JuCad drive Classic with bag Fashion

5 year warranty
on all JuCad titanium frames

JuCad drive Classic

The single-fold Classic trolley resurrected for the 30-year anniversary

Due to the expressed wishes of many clients we have resurrected our single-fold classic trolley in titanium for our company's 30-year anniversary. Based on the same design concept underlying all JuCad titanium models it now weighs only 6 kg. This unbeatable price / performance ratio is especially attractive to many club golfers. With a single action the JuCad drive Classic folds down ready for stowage if a mini size is not a travel requirement. Folded down the lightweight trolley measures 65x60x20 cm and is easily accommodated in any large car. Due to the unique drive train with its two invisible high-tech motors it's difficult to tell that it is an electric trolley. The intelligent JuCad traction system offers optimal driving ease in any terrain. The stepless drive control makes for comfortable driving and steering combined with its automatic downhill brake. A push button allows preset distance control for the trolley to stop automatically after 10, 20 or 30 metres saving unnecessary walking distances.

JuCad Titan

The sturdy lightweight titanium trolley

More than just any trolley – this ultra-light unpowered golf trolley in high class satin finish titanium for the discerning golfer is strikingly elegant and of lasting value. The large clip-on wheels running on quadruple ball bearings make driving this trolley especially easy. The JuCad Titan trolley is easily folded down to a very small size to find room in even small car boots. The height adjustable handle bar allows pushing or pulling that is easy on the back keeping muscles relaxed. When folded this lightweight trolley even fits into the Travelcover making it the ideal companion for the air travelling golfer. Especially on holidays you should be able to rely on your accustomed ease of use on any fairway. This sturdy trolley has no weight limit for any size golf bag. The three-wheeled Titan trolley can be supplied with the practical arrester brake which secures the trolley on very hilly golf courses.

JuCad Drive

The comfortable and robust electric trolley in stainless steel

The noble JuCad Drive electric golf trolley in high-quality stainless steel is in precision, robustness and functionality a competitive alternative to the exclusive light-weight electric JuCad trolleys in titanium. This sportive trolley in satin finish stainless steel with a single push-fit connection and small packing size can fit into most even small car boots. Its drive train concept with two invisible powerful high-tech motors guarantees quiet and fluent performance. The user-friendly rotary speed control and electronic downhill brake provide the same ease of use even on difficult terrain. The environment friendly power pack with its state of the art lithium technology is safely stored inside your golf bag – heart of the trolley is therefore protected from all external influences and the elegant appearance of the trolley is not marred by visible technological necessities.

JuCad Carbon Drive with bag Snake

JuCad Carbon Drive

The modern JuCad electric trolley

The JuCad trolley Carbon Drive with its unique lustrous surface finish is a similarly distinguished model with its functional controls and high quality finish. This Carbon trolley is especially user friendly. The elegant silhouette of the full carbon frame is free from the clutter of visible cables, battery or motors, which leaves it not obvious as an electric trolley. The stepless rotary speed control activates all movement as part of the proven JuCad technology to ensure comfortable ease of use. The powerful drive train can maintain the level of comfort even on mountainous region golf courses. After your round the trolley can quickly be taken apart for stowage in the carry bag or in the boot of your car.

JuCad Carbon with bag Fashion

JuCad Carbon

The modern lightweight trolley

The new manual Carbon trolley in elegant JuCad design with its frame in topgrade carbon is attractive above all through its extremely low weight. The clip-on wheels running on quadruple ball bearings ensure highest ease of use. The JuCad Carbon is easily assembled or quickly taken apart for stowage in even the smallest car boots. The height adjustable handle bar make pull or push operation possible without undue straining the back, leaving the muscles relaxed and the spine unstressed. The trolley can easily fit into the Travelcover and is the ideal travel partner for the air-travelling golfer – because especially during holidays the accustomed luxury using your trolley should not be missed.
